

DSP for Next Generation Wireless Systems

Chance Tarver

Joseph Cavallaro

April 26, 2018

Where we're going:

- Massive device to device connectivity:
 - Sensor Networks
 - Internet-of-Things
 - Body Area Networks
- Mobile Broadband over 100 Gpbs

UNITED STATES FREQUENCY ALLOCATIONS THE RADIO SPECTRUM

RADIO SERVICES COLOR LEGEND

- AERONAUTICAL MOBILE

AERONAUTICAL MOBILE SATELLITE

AERONAUTICAL RADIONAVIGATION

ALLOCATION USAGE DESIGNATION

SERVICE	EXAMPLE	DESCRIPTION
Primary	FIXED	Capital Letters
Secondary	MOBILE	1st Capital with lower case letters

This chart is a graphic single-point-in-time portrayal of the Table of Frequency Allocations used by the FCC and NTIA. As such, it does not completely reflect all aspects, i.e., footnotes and recent changes made to the Table of Frequency Allocations. Therefore, for complete information, users should consult the Table to determine the current status of U.S. allocations.

Challenges

- Densification
- Increased spectrum congestion
- New ultrawideband waveforms stressing the physical layer

Future Directions

- New spectrum resources in mmWave and beyond
- Massive MIMO
- Coexistence aware waveforms assisted by predistortion

Our Unique Approach

Post-layout chip view

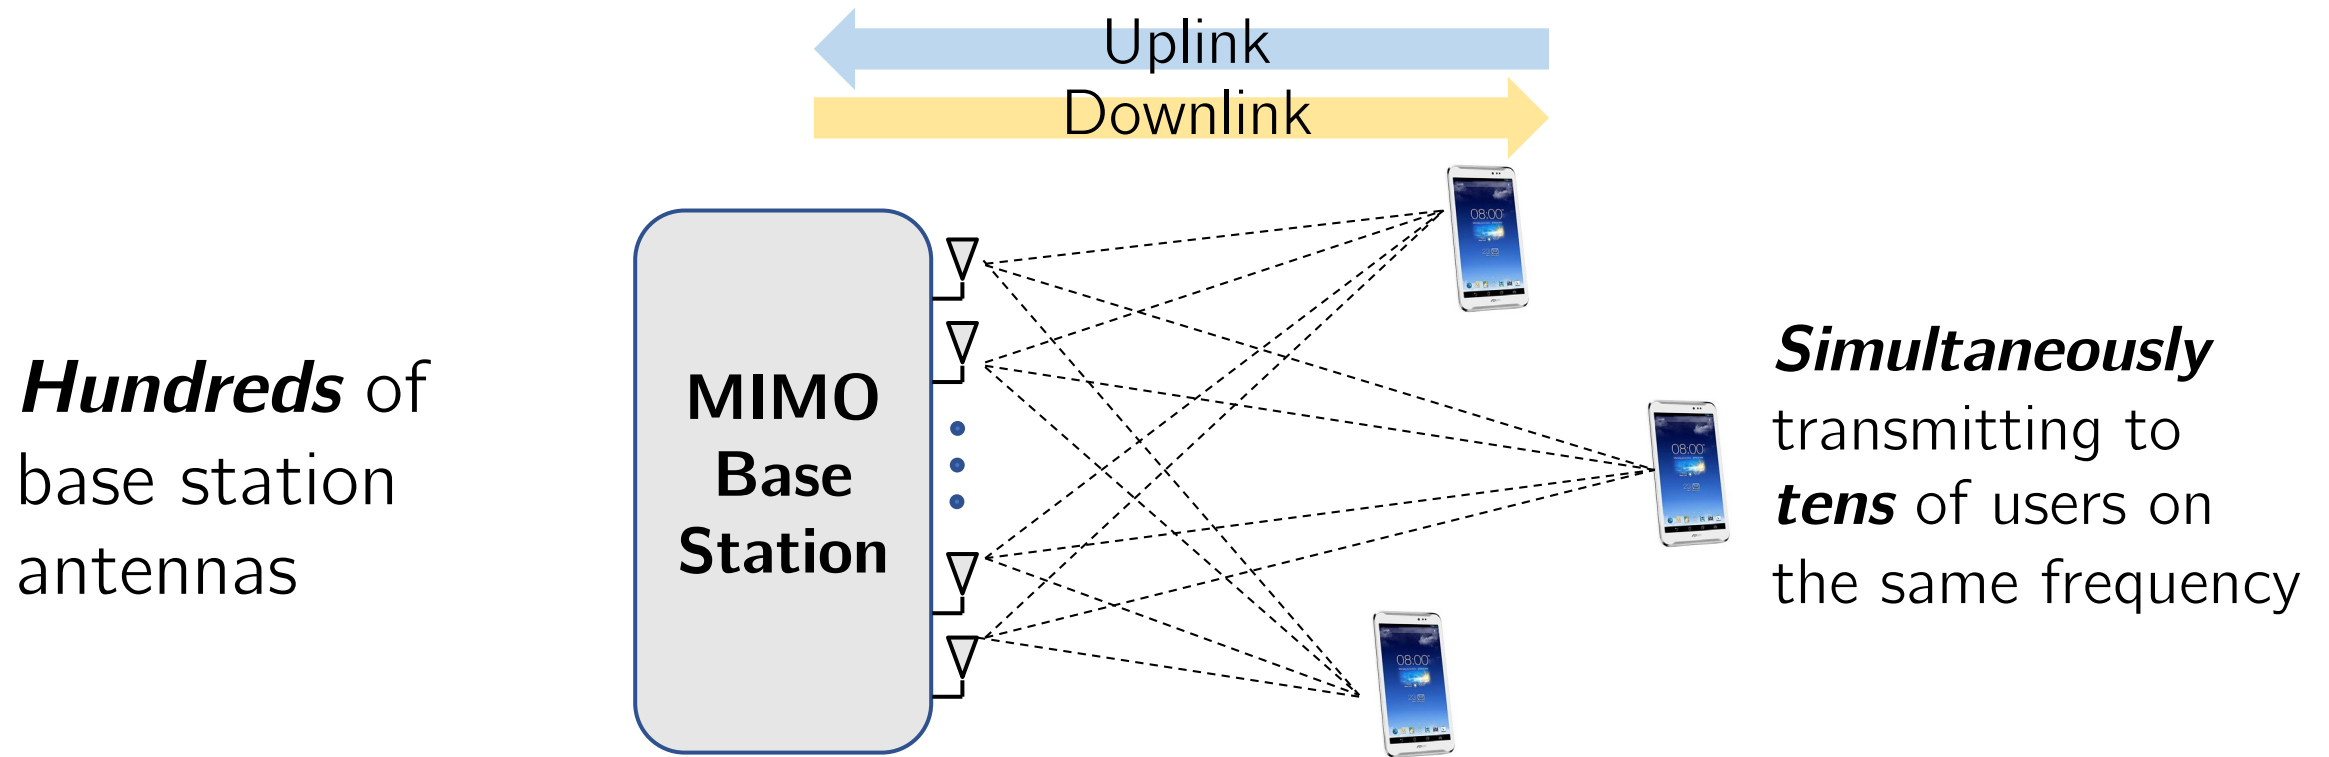

DSP / Algorithm

Architecture

Testbed

Co-design

Massive Multi-User MIMO Systems

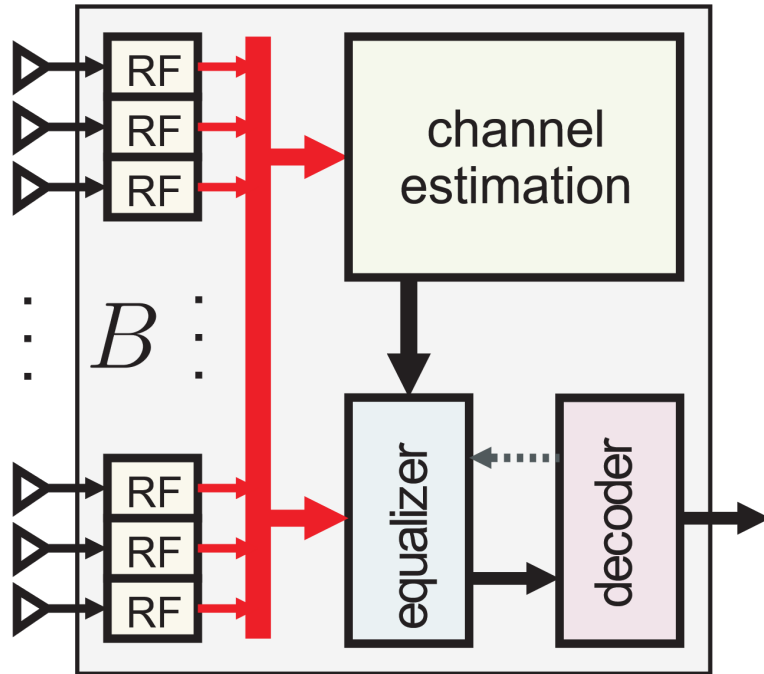

Record breaking spectral efficiency

I/O Bottlenecks

Decentralized Baseband Processing

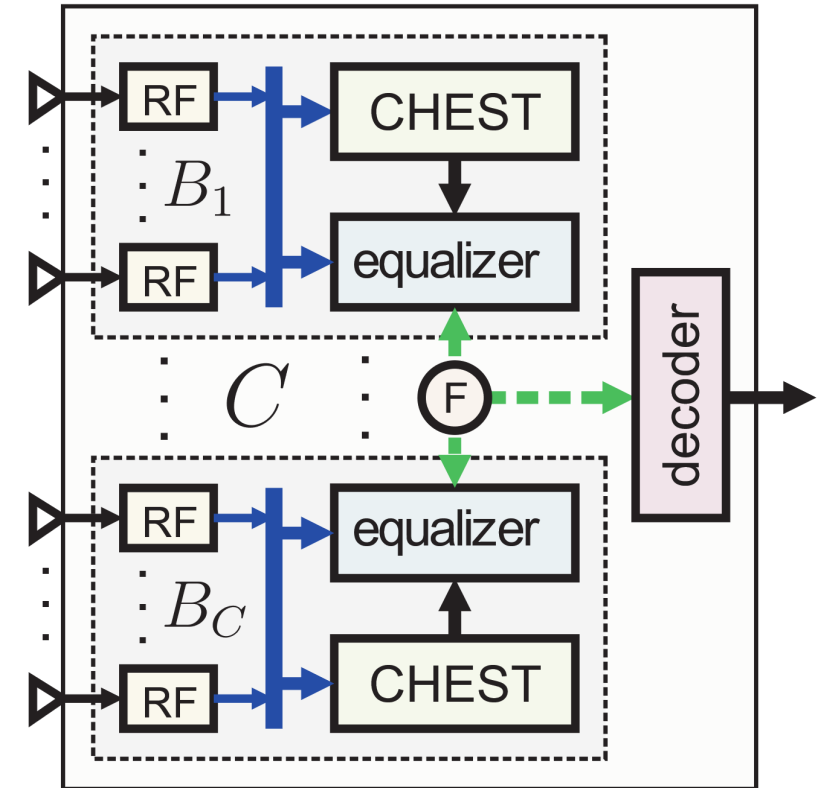

conventional BS

Split the base station antennas into clusters with fewer antennas.

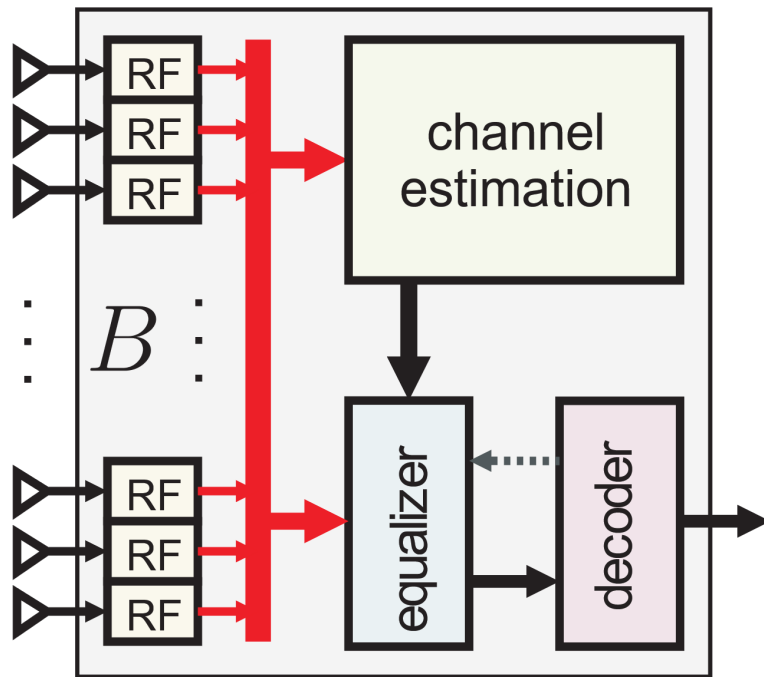

BS with decentralization

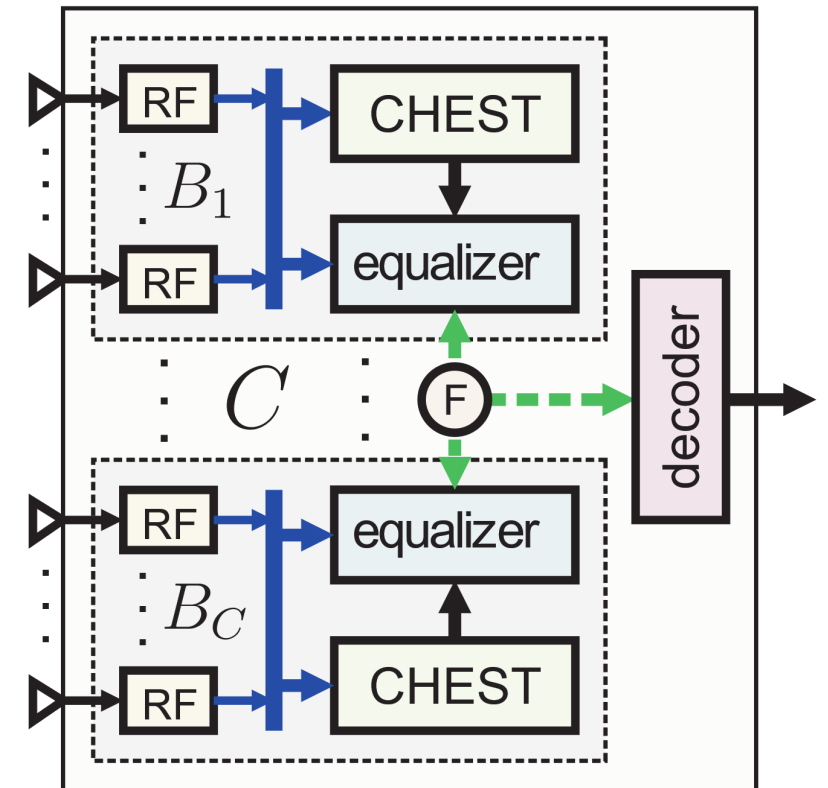

Decentralized Baseband Processing

conventional BS

- Alleviates interconnection and computation bottlenecks
- Realizes efficient, modular and scalable baseband processing
- Achieves competitive (or equal) performance to centralized methods

BS with decentralization

Reconfigurable Ecosystem for Next-gen End-to-end Wireless

Reconfigurable **E**co-system for **N**ext-generation **E**nd-to-end **W**ireless

- Develop world's first fully programmable and observable wireless radio network.
- Wireless research and development community will be able to test diverse ideas and concepts.
- PAWR. More than 28 private-sector companies from US wireless industry

WARP WIRELESS OPEN-ACCESS
RESEARCH PLATFORM

REW
Reconfigurable Ecosystem for Next-gen End-to-end Wireless

Predistortion for Power Amplifiers

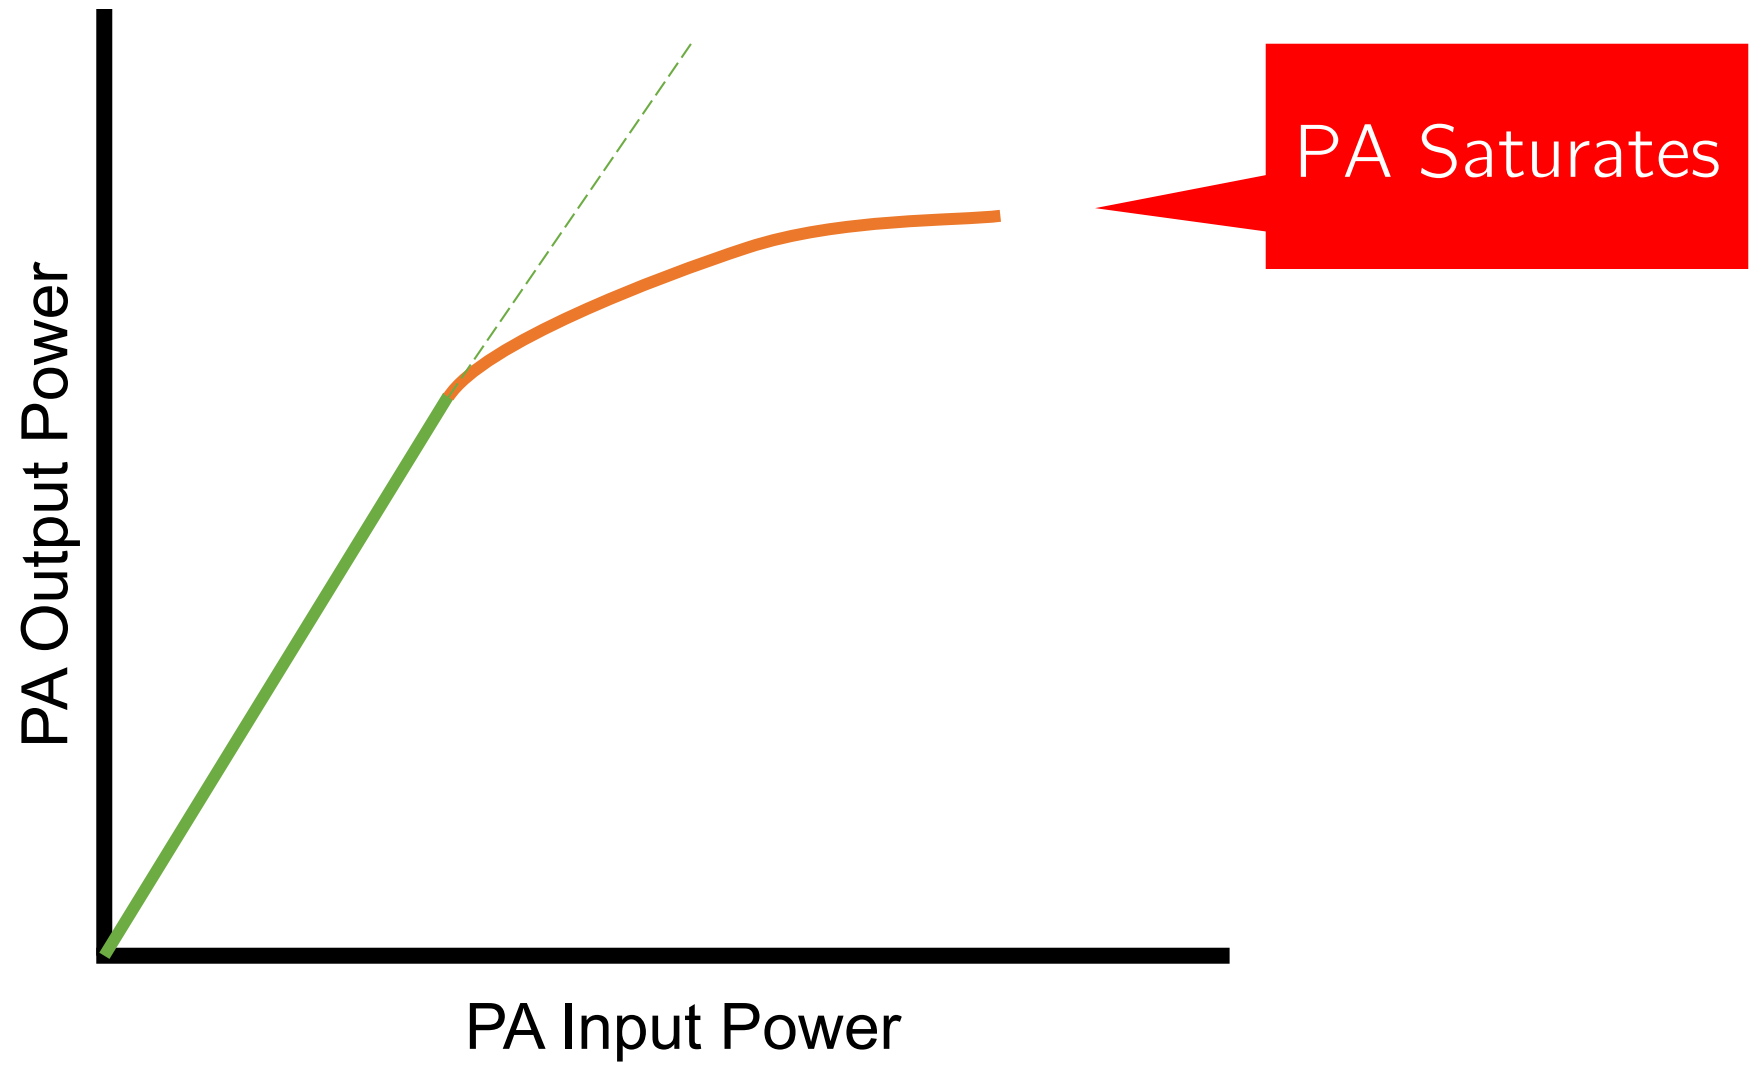

Predistortion for Power Amplifiers

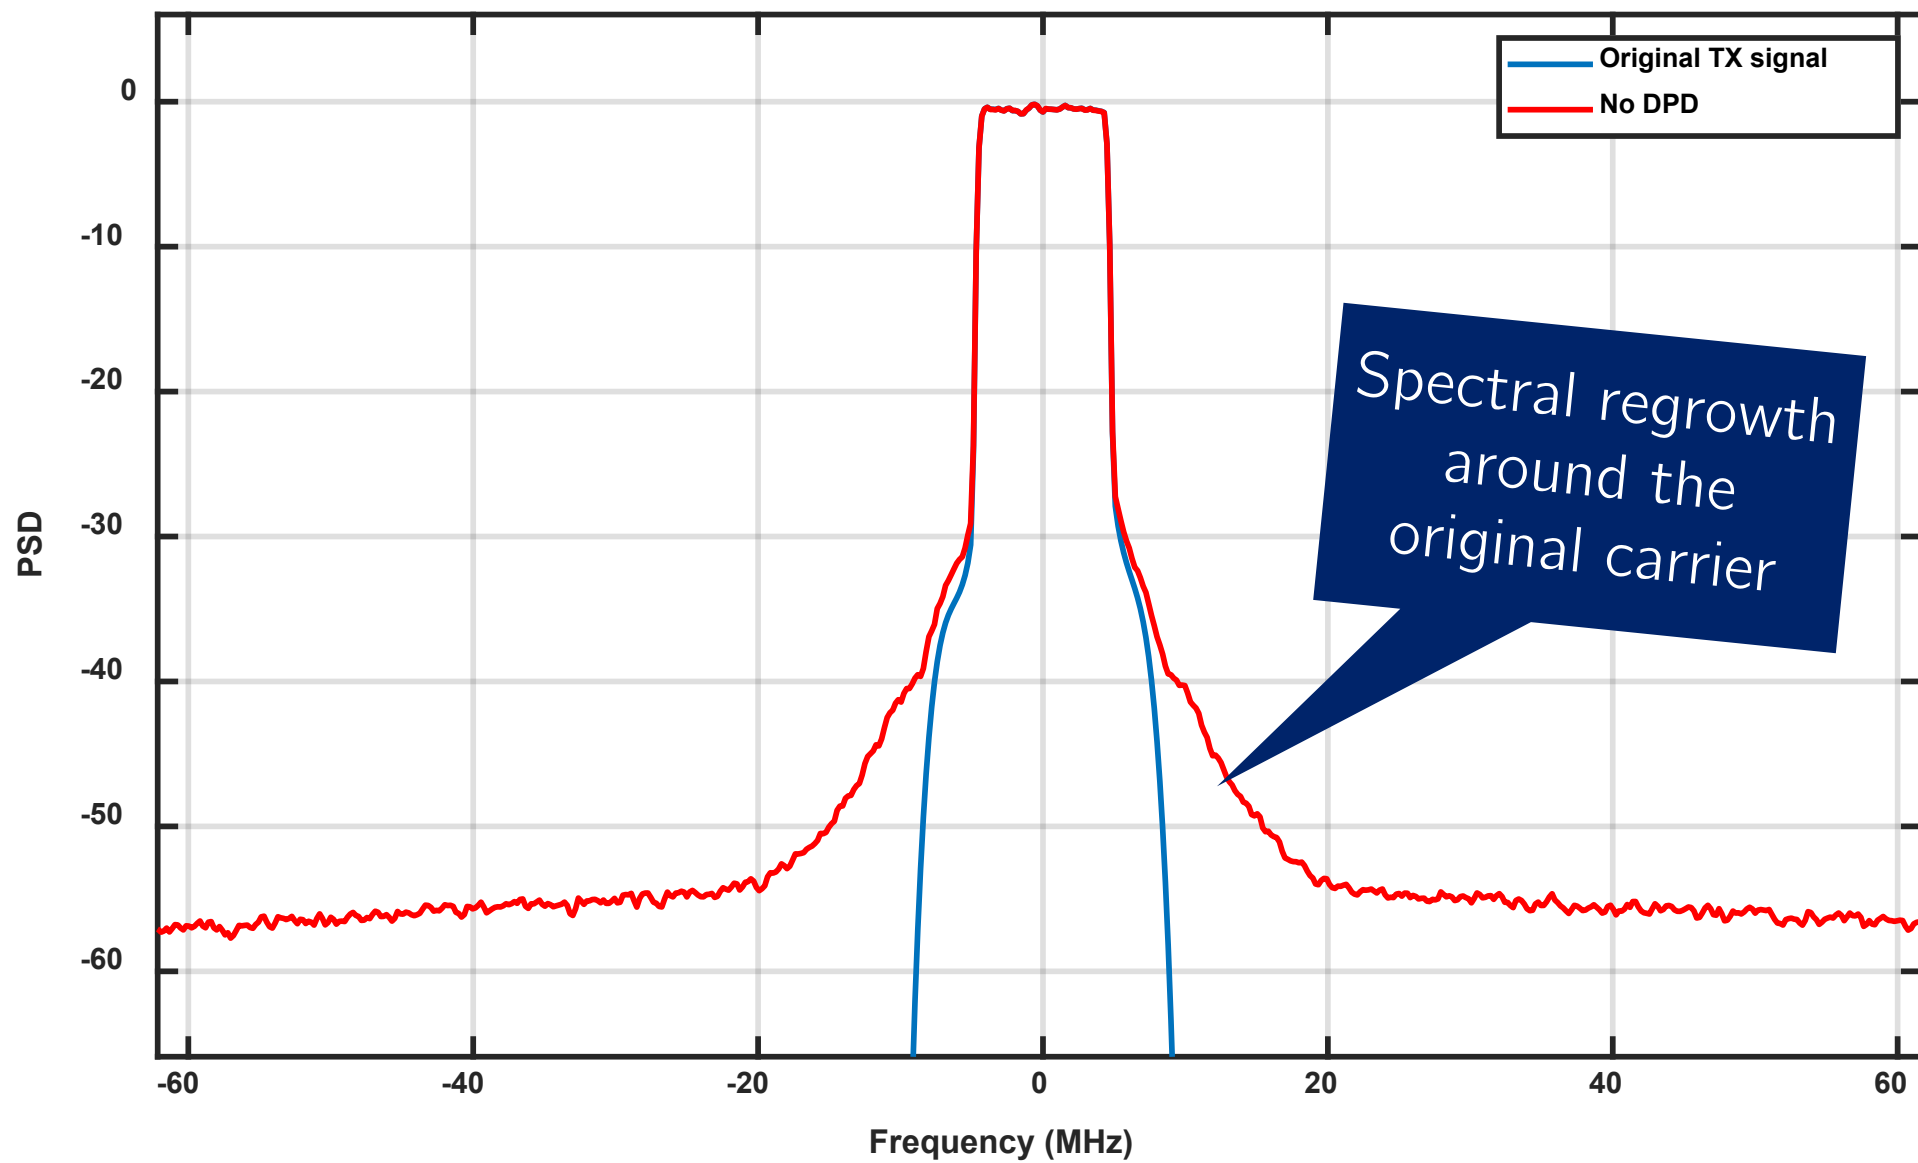

Predistortion for Power Amplifiers

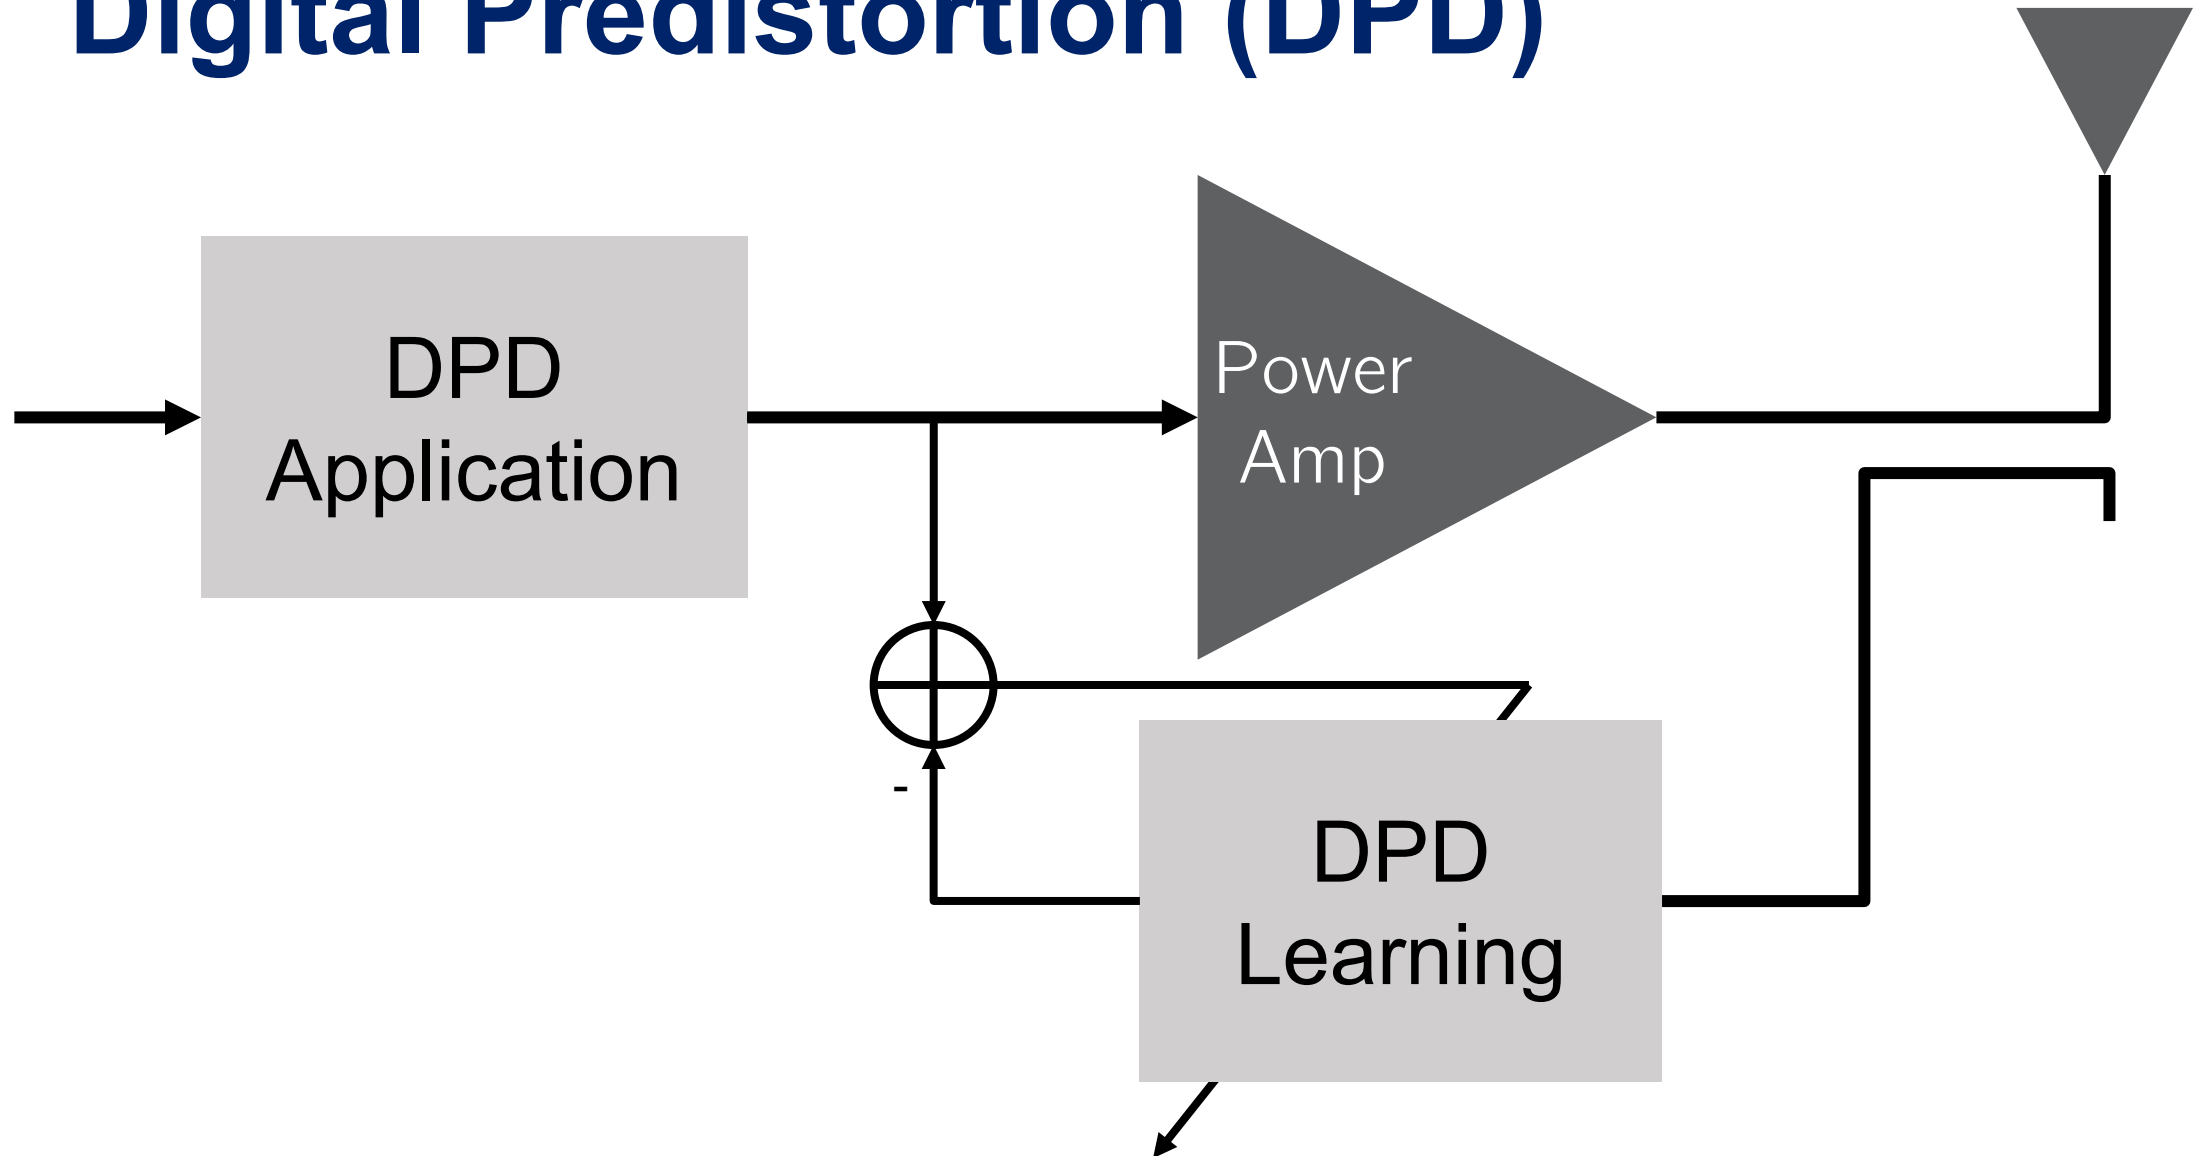

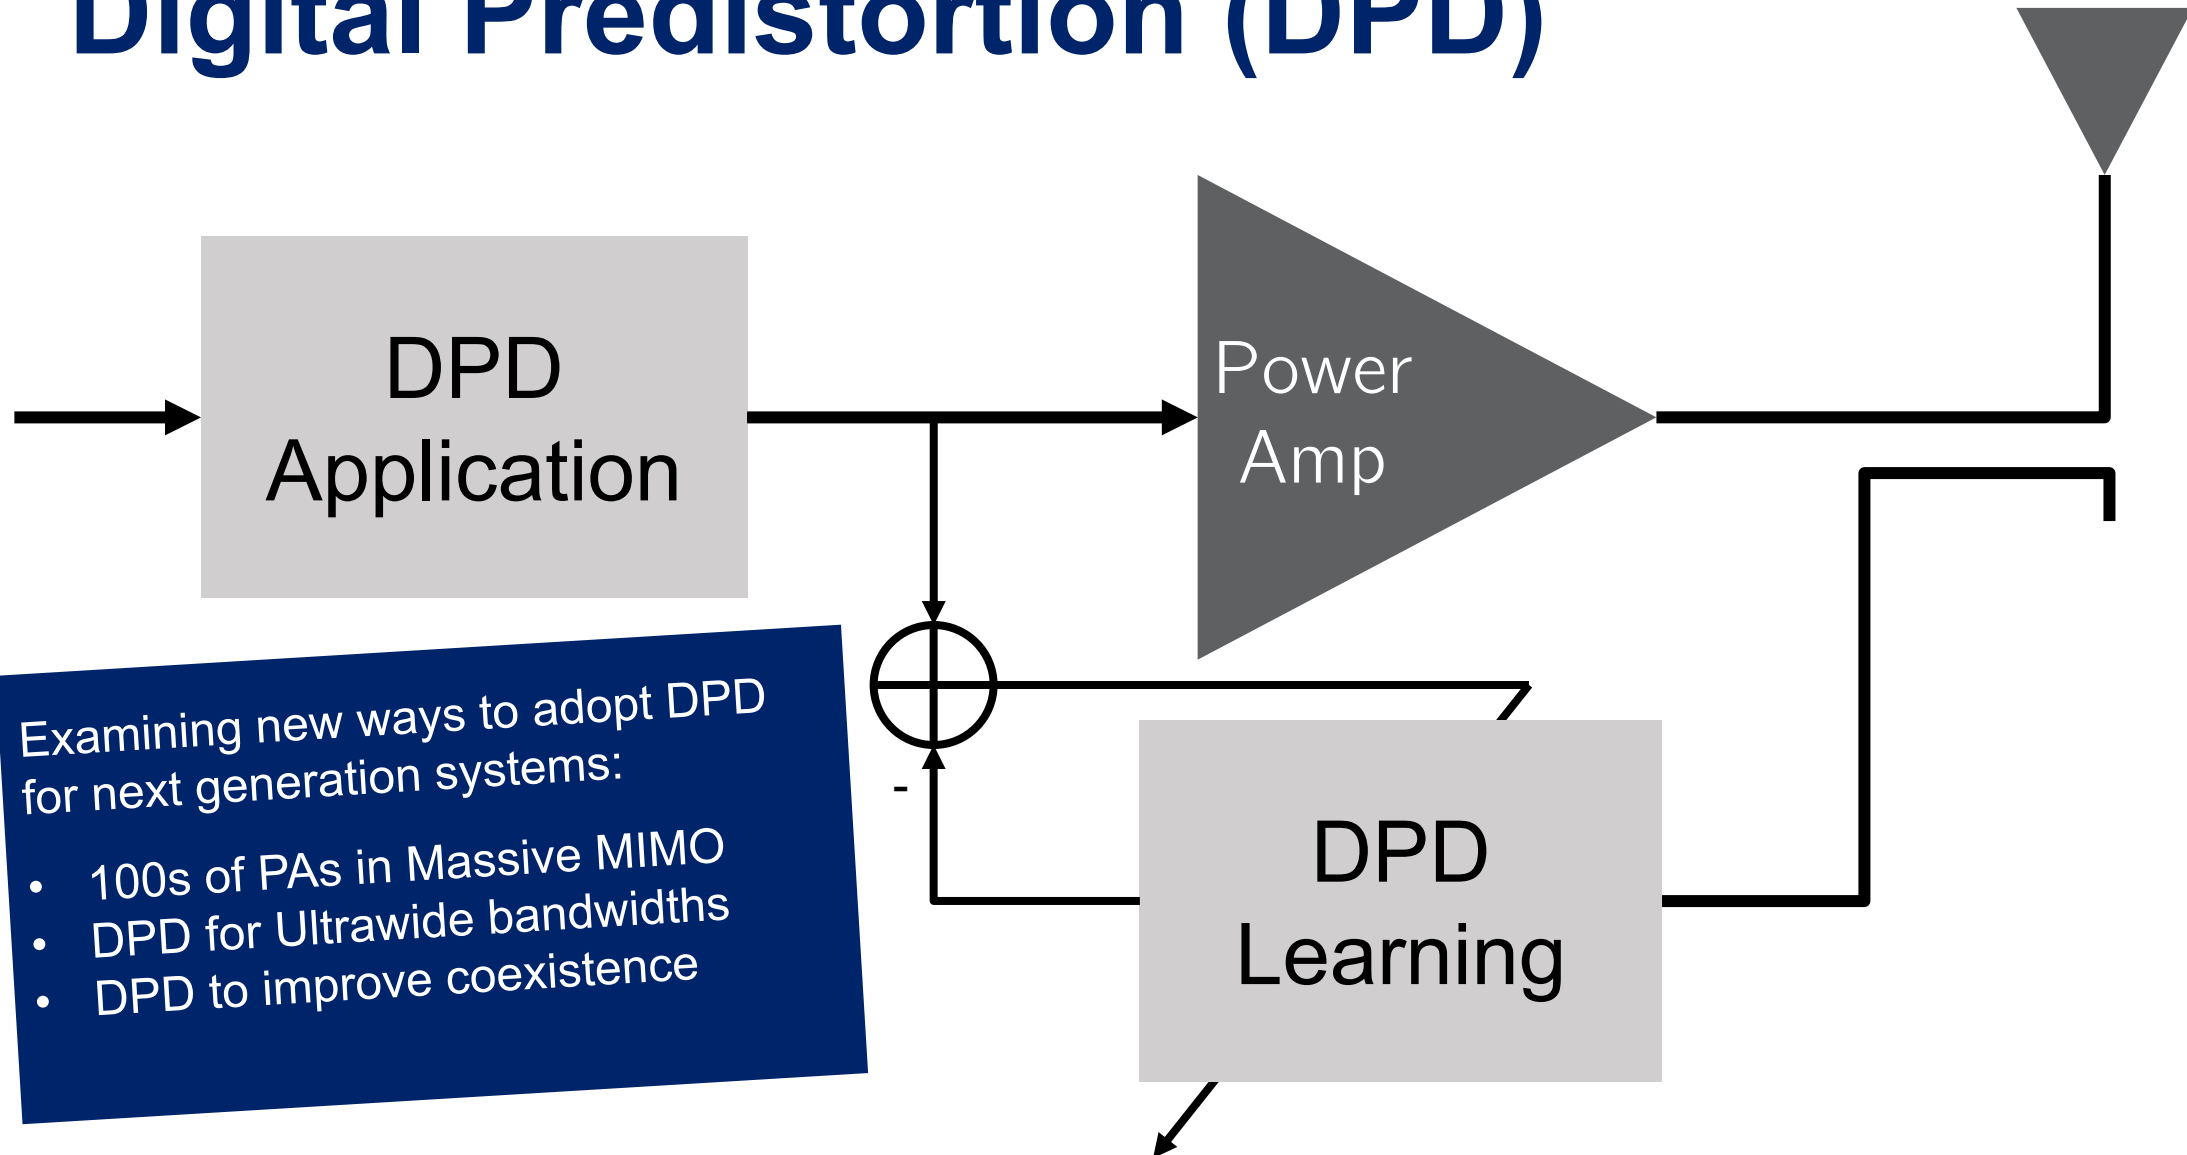

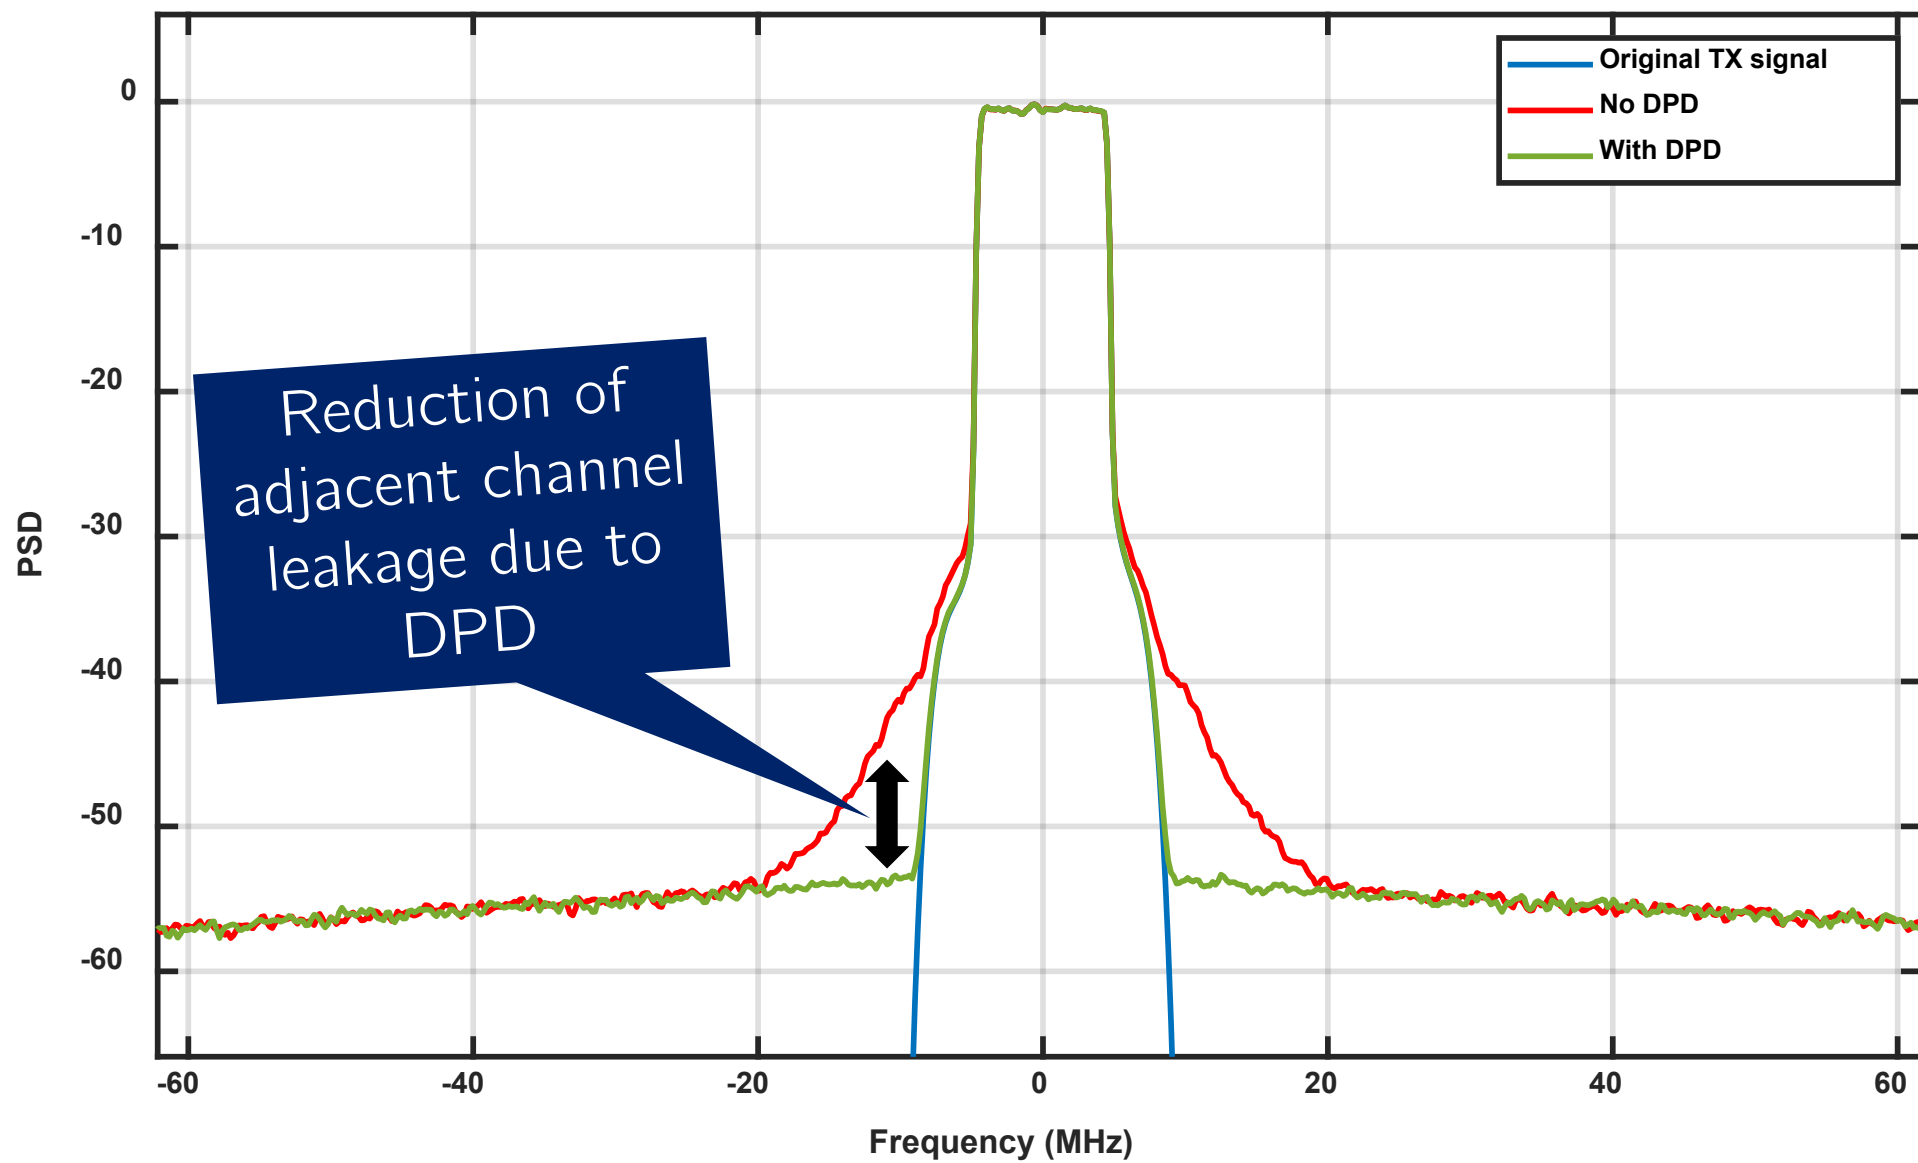

Digital Predistortion (DPD)

Digital Predistortion (DPD)

Conclusions

- Enabling massive device driven connectivity
- Codesign between algorithms and architectures is necessary to meet challenges in next generation wireless systems
